DETAILED ACTION

1. Amendments received on 11/17/2004 and 02/16/2005 have been entered into record. Claims 1, 11, and 28 are currently amended. Claims 2-10, 12-27, and 29-30 are previously presented.
2. Claims 1-30 are presented for examination.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
4. The effective filing date for the subject matter defined in the pending claims in this application is 04/03/2000.

Reasons for Allowance

5. Claims 1-30 are allowed.
6. The claimed invention involves a system operable to identify and access information about a user of a distributed communication system in real time without the users intervention, wherein the system comprises: at least one service device operable to provide services to said user, at least one access device operable to provide access to said distributed communication system, wherein said system also comprises: at least one control means is connected to said at least one access device and to said at least one service device via the Internet, wherein said at least one access device is connected to an identification device operable to identifying an address of a specific user; at least one storage device connected to said at least one control means, wherein said at least one control means is connected to a cache means operable to store

Art Unit: 2144

mappings of said address and identification of said users, wherein said service device sends a request for information about the user requesting a service from said service device to said control means, such that the control means checks if said cache means contains an up to date identification; whereby if said check gives an affirmative answer said control means fetches said information from said storage device and sends a reply comprising said information to said service device; and if said check gives a negative answer, said control means sends a request for a real time identification of said address to said access device, wherein said access device identifies said address with the aid of said identification device and sends said identification to said control means such that said control means fetches said information from said storage device and sends a reply comprising said information to said service device that identifies the user, wherein said information about the user is obtained without explicitly intervention from the user or from stored data on the user's computer.

7. The following is an examiner's statement of reasons for allowance: the limitation of if checking to determine whether the cache means contain an up to date identification gives a negative answer, said control means sends a request for a real time identification of said address to said access device, wherein said access device identifies said address with the aid of said identification device and sends said identification to said control means such that said control means fetches said information from said storage device and sends a reply comprising said information to said service device that identifies the user, wherein said information about the user is obtained without explicitly intervention from the user or from stored data on the user's

computer (defined in the present specification per Page 2 line 1-7, Page 3 line Page 5 lines 1-20, Page 7 line 26-Page 8 line 2 (Note: Amendment to the specification filed on March 09, 2004 pages 1-7 should be considered as appropriate); and conform to the drawings per Figures 2 and 3) was not taught or suggested by the prior art of record *in combination with the other limitations of the independent claims*. This feature is explained in further details in the arguments/remarks of Amendment filed on 11/17/2004 (pages 1-3).

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

9. Applicant's arguments, see Remarks pages 1-3, filed 11/17/2004, with respect to claims 1-30 have been fully considered and are persuasive. The rejection of claims 1-30 has been withdrawn.
